## DETAILED ACTION

### *Claim Objections*

1. Claims 2-3 are objected to because of the following informalities:

Claim 2 sets forth "each unit in a line is aligned with another unit *in all other lines*". This is not correct. Please clarify the language of this claim.

In Claim 3 it is unclear which "the line" is referred to since claim 1 sets forth plural lines. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-10, 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Park (5,971,546).

Park discloses a method for using an imaging apparatus comprising the steps of:  
emitting light from a set of light emitting pixels of an image modulator having an array of such pixels;

displacing the light from each light emitting pixel through transmissive optical means such that at least two pixels in a line are formed from the single original pixel;  
projecting the pixels on a screen.

Art Unit: 2851

Translation of the pixels may take place in both horizontal and vertical direction simultaneously and may overlap other pixels.

***Allowable Subject Matter***

4. Claims 11-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
